Operator's Card

Operator Instruction Tag fits on the cable above the Pendant Station.
Complies with ANSI and OSHA
Requirements for hoist and crane operators.

Order part number "Warning Label".

Printed in Spanish on reverse side.

The code numbering for the conductors in a round cable all follow NEMA standards. The Green wire is always a ground and should never be used for any switching function. The numbers shown on the chart are arranged so that the various cable sizes always start with the Green and end with the last number in the cable. For example, the RPC-414 (Note 4 is quantity, 14 is the wire gauge) uses the Green, Black, Red and Blue. The RPC-816 uses the Green and numbers 1 thru 7. The rest of the cable sizes are listed along the color coding chart.

The exception to the color coding chart is the RPC-316-S2. This special round cable is primarily for two button stations that need either an internal strain cable or ground. In this cable you have both in the Green wire. It is constructed of a heavy steel braid which will serve for either or both purposes. The other three colors are blue, yellow and brown.

Additional Information

Legend Plate LP-17
